

Ski Jump International v3 (SDL2 port)

build **passing**

downloads **442**

release **sj313-sp3**

[Repository](#)

[Skijump International v3 website](#)

Huge thanks for original author Ville Könönen for open-sourcing this absolute classic gem from the good old DOS days.

[Original Credits](#)

This repository is for SDL2 port. If you would like to build or play Skijump International v3 on DOS, take a look at [open-sourced DOS version](#) instead.

Playing

[Original Quick Guide](#)

Note: Please note that hill records from open sourced version are not accepted in any of the hiscore lists. You need to play [original closed DOS version](#) to qualify.

Differences compared to DOS version

Port attempts to be carbon copy of original DOS version, even to such extent that you can share configuration files. Only minor bugs like some buffer overflows have been fixed.

Additional port related shortcuts

Key	Description
Alt+Enter	Toggle fullscreen
Alt+(Keypad) Plus	Increase window size
Alt+(Keypad) Minus	Decrease window size

Alt+R	Reset window if stretched
-------	---------------------------

Build

Build has been tested on Windows 10 and Linux using Free Pascal Compiler.

Compilation process on Ubuntu is following

```
# Install compiler and SDL2
$ sudo apt-get install fpc libsdl2-dev

# Clone Pascal SDL2 headers
$ git clone https://github.com/ev1313/Pascal-SDL-2-Headers

# Compile in Turbo Pascal mode
$ fpc -Mtp -Fu./Pascal-SDL-2-Headers/ SJ3.PAS
```

You can find full instructions how to compile Pascal SDL2 applications from ["Free Pascal meets SDL"](#) also for Windows. You can either install just Free Pascal Compiler or Lazarus IDE which bundles editor and the compiler.

Releases

[Version 3](#) - 2020-11-22

- Graceful shutdown with save when closing with window close button

[Version 2](#) - 2020-11-08

- [Improve input handling of special keys](#)
- [Fix pausing after landing with Caps Lock or Shift on](#)

[Version 1](#) - 2020-06-16

- Initial release
